Portfolio: ranbirmishra2004.github.io

PROFESSIONAL SUMMARY

Entry-Level SOC & Cybersecurity Analyst | MCA Graduate with hands-on experience in SIEM monitoring, security log analysis, threat detection, and incident triage. Proficient in Splunk Enterprise and SPL for analyzing and correlating Windows security telemetry, including Event IDs 4624, 4625, and 4740, along with PowerShell and Sysmon logs to identify suspicious authentication and credential-abuse activity. Experienced in network traffic analysis with Wireshark and Nmap, vulnerability assessment using Burp Suite and Nessus, and web security testing aligned with the OWASP Top 10. Skilled in Linux administration, Bash scripting, TCP/IP networking, IoC investigation, MITRE ATT&CK mapping, and security documentation, with practical exposure to EDR-based threat detection and incident response using LimaCharlie.

SKILLS

TECHNICAL SKILLS

SIEM & SOC OPERATIONS: Splunk Enterprise, SPL, Universal Forwarder, Log Ingestion & Centralized Logging, Security Monitoring, Alert Triage, Threat Detection, Incident Investigation, Windows Event Log Analysis (4624, 4625, 4672, 4740), Sysmon, PowerShell Logging

THREAT DETECTION & INCIDENT RESPONSE: MITRE ATT&CK, NIST Incident Response Lifecycle, Cyber Kill Chain, IoC Identification & Analysis, Incident Triage, Root Cause Analysis, Evidence Collection, Threat Investigation, Incident Documentation, Detection Engineering

VULNERABILITY & WEB SECURITY: VAPT, OWASP Top 10, SQL Injection, XSS, Command Injection, Broken Access Control, API Security Testing, Vulnerability Validation, Remediation Tracking, Burp Suite, Nessus, OpenVAS, OWASP ZAP, Nikto

NETWORK SECURITY & ANALYSIS: TCP/IP, DNS, SSH, Network Traffic Analysis, Packet Analysis, Wireshark, Nmap, Port Scanning & Service Enumeration, Firewall Fundamentals, Netcat, Metasploit

EDR & ENDPOINT SECURITY: LimaCharlie EDR, Windows Endpoint Monitoring, Endpoint Telemetry Analysis, Process & Command-Line Analysis, PowerShell Monitoring, Detection Rules, Process Tree Investigation, MITRE ATT&CK Mapping

LINUX & WINDOWS ADMINISTRATION: Kali Linux, Ubuntu, Windows 10/11/Server, Linux CLI, User & Permission Management, chmod, chown, sudoers, Process Management, ps, top, systemctl, journalctl, Syslog, Cron

SCRIPTING & DEVELOPMENT: Python, Bash Scripting, SQL, MySQL, MongoDB, Git, GitHub, VS Code

EXPERIENCE

Cybersecurity & SOC Operations Trainee | Self-Directed Security Operations Lab

Practical SOC Monitoring, Threat Detection & Incident Response | 3 Months

- Monitored and analyzed security telemetry across Windows and Linux lab environments, correlating authentication, process, network, and system events to identify suspicious activity and potential security incidents.
- Performed Tier-1 SOC alert triage and investigation, analyzing event context, Indicators of Compromise (IoCs), process activity, and network connections to distinguish potential threats from benign activity.
- Conducted network security analysis using Wireshark and Nmap to investigate traffic patterns, suspicious connections, exposed services, port scans, and network anomalies.
- Executed vulnerability assessments and security validation using Nessus, Nmap, Nikto, Burp Suite, and OWASP ZAP, identifying and documenting vulnerabilities aligned with the OWASP Top 10.
- Investigated Linux security events and system anomalies using journalctl, systemctl, syslog, Bash, and Cron, supporting endpoint monitoring and security auditing activities.
- Developed practical detection and investigation workflows using centralized logging, event correlation, IoC analysis, and MITRE ATT&CK mapping to simulate real-world SOC operations.
- Prepared structured incident investigation reports documenting alert context, evidence, analysis, findings, affected systems, and recommended remediation actions.

PROJECTS

SIEM-Based SOC Monitoring, Threat Detection & Incident Investigation

Technologies: Splunk Enterprise, Universal Forwarder, Windows Event Logs, Sysmon, SPL, Ubuntu, Windows 10

- Architected a centralized SOC lab deploying Splunk Universal Forwarder across virtual endpoints to capture Windows Security, System, Application, and PowerShell event logs.
- Authored custom Search Processing Language (SPL) queries and correlation searches to identify unauthorized access and brute-force attempts targeting Event IDs 4624 (Successful Logon), 4625 (Failed Logon), 4648 (Explicit Credentials), 4672 (Admin Logon), and 4740 (Account Lockout).
- Implemented Sysmon telemetry and PowerShell script-block monitoring to detect living-off-the-land techniques, process creation anomalies, and credential harvesting patterns.
- Extracted forensic triage artifacts—including source IP, account credentials, workstation names, and logon types—and created an operational dashboard with threshold-based alerting.
- Executed end-to-end incident investigation workflows across four stages: detection → analysis → validation → incident reporting.

Windows EDR Threat Detection & Incident Response Using LimaCharlie

LimaCharlie EDR | Windows | MITRE ATT&CK | SOC Operations

- Built a Windows EDR lab for endpoint monitoring, threat detection, and incident investigation using LimaCharlie.
- Created detection rules for PowerShell, command execution, scheduled tasks, and suspicious network activity.
- Investigated endpoint telemetry, analyzed process activity and attack behavior, and mapped findings to MITRE ATT&CK techniques.
- Documented the complete SOC workflow from alert triage through investigation, response, and reporting.

Network Security Monitoring, Packet Forensics & Traffic Analysis Lab

Technologies: Wireshark, Nmap, hping3, TCP/IP, Kali Linux

- Conducted service enumeration, port discovery, and operating system fingerprinting across target machines using Nmap to evaluate attack surfaces.
- Captured and analyzed live TCP/IP traffic utilizing Wireshark; performed deep-packet inspection (DPI) to identify unusual handshake anomalies, protocol abuse, and plaintext transmissions.
- Generated controlled synthetic packet bursts with hping3 to simulate abnormal traffic volumes, testing packet behavior under SYN flood and DoS conditions.
- Documented network traffic baselines, identified Indicators of Compromise (IoCs), and authored technical triage briefs detailing containment strategies.

Web Application Vulnerability Assessment & Mitigation (DVWA)

Technologies: Burp Suite, Nessus, OWASP ZAP, Nikto, OpenVAS, Kali Linux

- Performed structured black-box and gray-box vulnerability assessments against Damn Vulnerable Web Application (DVWA) across multiple security difficulty configurations.
- Tested, validated, and documented critical OWASP Top 10 vulnerabilities including SQL Injection (SQLi), Reflected and Stored Cross-Site Scripting (XSS), OS Command Injection, and Broken Access Control.
- Deployed Burp Suite (Repeater, Intruder) for payload manipulation and request analysis, alongside automated vulnerability scanners (Nessus, OWASP ZAP, Nikto, OpenVAS) to identify unpatched services.
- Compiled comprehensive VAPT assessment reports detailing proof-of-concept (PoC) exploits, CVSS severity ratings, false positive elimination, and step-by-step remediation advice.

EDUCATION

Master of Computer Applications (MCA)

2024–2026

Dr. Harisingh Gour Central University, Sagar, Madhya Pradesh | **8.67 CGPA**

Bachelor of Science in Computer Science

2021–2024

Utkal University, Bhubaneswar, Odisha | **81.72% | 8.4 CGPA**

Higher Secondary Education (+2 Science)

2019–2021

Fakir Mohan Higher Secondary School, Balasore, Odisha | **85%**

CERTIFICATIONS & TRAINING

- **Cybersecurity Analyst Job Simulation** — Deloitte, Forage
- **Foundations of Cybersecurity** — Google, Coursera
- **Connect and Protect: Networks and Network Security** — Google
- **Play It Safe: Manage Security Risks** — Google, Coursera
- **Ethical Hacker** — Cisco Networking Academy
- **Cybersecurity Fundamentals** — IBM SkillsBuild
- **Introduction to Cybersecurity** — Cisco Networking Academy

ACHIEVEMENT

- **Selected for IDEATHON – Smart India Hackathon 2025 (Internal Round)**; collaborated with a cross-functional team to develop and present the “Discover Delight” project.
- **TryHackMe — Top 4% Global Ranking**: Demonstrated hands-on cybersecurity skills through practical labs covering **SOC Operations, Threat Detection, Network Security, Linux, Web Security, and Incident Response**.
